AutoCAD brings features of SolidWorks to AutoCAD as well as features of Solid Edge. More recently it has also added some features of CATIA and FEMTO.

The interoperability with Solidworks is achieved through the DWG format. A new DXF format has also been developed, called DWGv8, a vectorised version of the DXF format, in use on the Solidworks software. Autodesk's Marketplace is a way to obtain add-ons to AutoCAD. The add-ons are provided in source or binary formats. The marketplace also offers industry-standard

licensing, allowing for even better protection of intellectual property. Usability The development team has sought to improve the usability of AutoCAD, which has been used in the industry for over 20 years. In 2010, Autodesk began to develop a new user interface, which they named Revit, for use with the Revit Architecture, Architectural Design, and Interior Design software. The Revit interface is based on digital patterns, a visual language used in product design, and can be customized in numerous ways by the user. Revit is used for 3D architectural design and construction, interior design and furniture design. It is interoperable with other Autodesk products, including AutoCAD, and is a CAD-based product, but is more like an office suite that includes a 2D CAD-like tool. Revit is also customizable via code and has its own web platform. Autodesk Revit 2016 was the first version to be based on a revolutionary new digital design technology called "digital patterns". Revit 2016 was designed to adapt to the workflow of the architectural profession, with a design-centric user interface and a dramatic redesign of the modeling tools. Revit 2016 also added an integration with the Open Data Kit,

allowing designers to work with open-source information, such as building data. Autodesk has a free Autodesk University for AutoCAD that is in various languages and interactive. Autodesk has also released a free online course titled Real World Digital Design, which is interactive. In 2015, a new release of AutoCAD, AutoCAD 2015, was announced by Autodesk. It was announced to be the last release of AutoCAD, as Autodesk was going to change the product names from AutoCAD and AutoCAD LT. This product was not the new version of AutoCAD, as Autodesk had ca3bfb1094
