## AutoCAD Crack + For PC

AutoCAD Models (.DWG) and Drawing Files (.DWF) In addition to the native DXF drawing format, AutoCAD allows users to create proprietary native CAD models and native files using AutoCAD Architecture (formerly MicroStation) and other plugins. The proprietary native CAD models can be converted into DXF drawings using a process called native CAD drafting. AutoCAD comes with 32-bit and 64-bit versions of Windows. The 32-bit version is available in Standard, Enterprise, and Architect editions. AutoCAD 64-bit is available only in the Architect edition. AutoCAD Enterprise edition has more features and is more expensive than the Standard edition. The AutoCAD Architect edition includes an integrated 3D Building Designer product. Vector Drawing and Graphic Objects AutoCAD uses vectors and bitmap graphics. Submodels and Tolerance AutoCAD may be used in a process called distributed design using two-dimensional (2D) drawings and three-dimensional (3D) models. The 2D drawing is distributed to various users while the 3D model is kept in a central server. All of the shared 3D models are visible on the 2D drawing. The 3D model can be divided into separate submodels with shared or separate database objects. The 3D model can be divided into submodels based on the scope of the modeling and

engineering. Scale and Viewing In AutoCAD, drawing scale is limited to a small fraction of the actual dimensions of the model. When a model is scaled, the entire model is moved proportionately. However, scaling is relative to the size of the model. Scaling the model may move the view or perspective. Viewing angle is limited to 10 degrees below horizontal or above vertical. Once viewing angle is set, it is fixed. Viewing angle controls the rotation of the view or perspective.

**Alignment and Registration** The alignment of a 2D drawing is relative to the model of the 3D model. The alignment of a 2D drawing is relative to the edges and corners of the model. The alignment is based on a point on the 2D drawing called the registration point. The registration point is the point at which the current view or perspective is centered on the model. The registration point may be on the model, on the paper, or on the 3D view. Insert
